**General Description**

The AON6278 uses trench MOSFET technology that is uniquely optimized to provide the most efficient high frequency switching performance. Both conduction and switching power losses are minimized due to an extremely low combination of $R_{DS(on)}, Ciss$ and $Coss$. This device is ideal for boost converters and synchronous rectifiers for consumer, telecom, industrial power supplies and LED backlighting.

**Product Summary**

- $V_{DS}$: 80V
- $I_D$ (at $V_{GS}=10V$): 85A
- $R_{DS(on)}$ (at $V_{GS}=10V$): <3.3mΩ
- $R_{DS(on)}$ (at $V_{GS}=6V$): <4.6mΩ

100% UIS Tested
100% $R_D$ Tested

Q_{f} | Body Diode Reverse Recovery Charge | I_F=20A, dI/dt=500A/µs | 174 |     |     | nC    |

---

A. The value of R_{\text{DS(on)}} is measured with the device mounted on 1in² FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C. The Power dissipation P_{DSM} is based on R_{\text{DS(on)}} ≤ 10s and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design.

B. The power dissipation P_{DSM} is based on R_{\text{DS(on)}}=150°C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature T_{J(MAX)}=150°C. Ratings are based on low frequency and duty cycles to keep initial T_J=25°C.

D. The R_{\text{DS(on)}} is the sum of the thermal impedance from junction to case R_{\text{JC}} and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using <300µs pulses, duty cycle 0.5% max.

F. These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of T_{J(MAX)}=150°C. The SOA curve provides a single pulse rating.

G. The maximum current rating is package limited.

H. These tests are performed with the device mounted on 1 in² FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C.
