ALPHA \& OMEGA
SEMICONDUCTOR

## General Description

The AOZ1334ADI-01 is a single channel load switch with very low on-resistance in a small package. It contains an n-channel MOSFET for up to $\mathrm{V}_{\mathrm{BIAS}}-1.5 \mathrm{~V}$ input voltage operation and 10 A current channel with 3.2 V to 5.5 V bias supply. The load switch is controlled by a low voltage control signal through ON pin.

The AOZ1334ADI-01 integrates an internal $220 \Omega$ load resistor for quick output discharge when load switch is off.

The AOZ1334ADI-01 is available in a $3 \mathrm{~mm} \times 3 \mathrm{~mm}$ DFN8 L package with bottom thermal pad and is rated over a $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ ambient temperature range.

## Features

- 0.8 V to $\mathrm{V}_{\mathrm{BIAS}}-1.5 \mathrm{~V}$ input voltage range
- 10A continuous current
- Low $\mathrm{R}_{\mathrm{DS}(\mathrm{ON})}$ internal NFETs
$-5 \mathrm{~m} \Omega$ at $\mathrm{V}_{\text {BIAS }}=5 \mathrm{~V}, \mathrm{~V}_{\text {IN }}=1.05 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=85^{\circ} \mathrm{C}$
- $35 \mu \mathrm{~A}$ low quiescent current
- $10 \mu \mathrm{~s}$ turn on rise time
- 3.2 V to 5.5 V bias voltage
- Integrated quick output discharge resistor
- Thermally enhanced $3 \mathrm{~mm} \times 3 \mathrm{~mm}$ DFN-8L package

## Applications

- Portable computers
- Ultrabooks
- Tablet PCs
- Set top boxes
- LCD TVs
- Telecom/Networking/Datacom equipment
- SSD
- Consumer electronics

## Typical Application

## Ordering Information

| Part Number | Temperature Range | Package | Environmental |
| :---: | :---: | :---: | :---: |
| AOZ1334ADI-01 | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | $3 \mathrm{~mm} \times 3 \mathrm{~mm}$ DFN-8L | Green |

All AOS products are offered in packages with Pb -free plating and compliant to RoHS standards.
Please visit www.aosmd.com/media/AOSGreenPolicy.pdf for additional information.

## Pin Configuration

3mm x 3mm DFN-8
(Top View)

3mm x 3mm DFN-8
(Bottom View)

## Pin Description

| Pin Number | Pin Name | Pin Function |
| :---: | :---: | :--- |
| 1,2, EPAD | IN | Load Switch Input. Bypass capacitor is recommended to minimize input voltage dip. <br> Recommended voltage range of this pin is 0.8 V to $\mathrm{V}_{\text {BIAS }}-1.5 \mathrm{~V}$ to obtain optimal $\mathrm{R}_{\mathrm{ON}}$ |
| 3 | VBIAS | Bias Voltage. Power supply input for the device. Recommended voltage range is 3.2 V to <br> 5.5 V. |
| 4 | ON | Enable Input. Load switch is on when ON is pulled high. Load switch is off when ON is <br> pulled low. Do not leave floating. |
| 5 | GND | Ground. |
| $6,7,8$ | OUT | Load switch output. |

## Absolute Maximum Ratings

Exceeding the Absolute Maximum ratings may damage the device.

| Parameter | Rating |
| :--- | ---: |
| IN, ON, VBIAS, OUT to GND | -0.3 V to 6 V |
| Junction Temperature $\left(\mathrm{T}_{\mathrm{J}}\right)$ | $+150^{\circ} \mathrm{C}$ |
| Storage Temperature $\left(\mathrm{T}_{\mathrm{S}}\right)$ | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| ESD Rating HBM/CDM | $2 \mathrm{kV} / 1 \mathrm{kV}$ |

## Recommend Operating Ratings

The device is not guaranteed to operate beyond the Maximum Operating Ratings.

| Parameter | Rating |
| :--- | ---: |
| Supply Voltage $\left(\mathrm{V}_{\mathrm{IN}}\right)$ | $\mathrm{V}_{\mathrm{BIAS}}-1.5 \mathrm{~V}$ |
| Ambient Temperature $\left(\mathrm{T}_{\mathrm{A}}\right)$ | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| Package Thermal Resistance |  |
| $3 \times 3$ DFN-8 $\left(\Theta_{\mathrm{JC}}\right)$ | $8^{\circ} \mathrm{C} / \mathrm{W}$ |
| $3 \times 3$ DFN-8 $\left(\Theta_{\mathrm{JA}}\right)$ | $60^{\circ} \mathrm{C} / \mathrm{W}$ |

## Electrical Characteristics

$\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{BIAS}}=5 \mathrm{~V}, \mathrm{~V}_{I N}=1.05 \mathrm{~V}$, unless otherwise specified. Specifications in BOLD indicate a temperature range of $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$.

| Symbol | Parameter | Conditions | Min. | Typ. | Max. | Units |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $V_{\text {IN }}$ | IN Supply Voltage | $\mathrm{V}_{\text {ON }}=5 \mathrm{~V}$ | 0.8 | 1.05 | $\mathrm{V}_{\text {BIAS }}{ }^{-1.5}$ | V |

## Detailed Description

## ON/OFF Control

The AOZ1334ADI-01 is enabled when the ON pin is on active high with 1.2 V or above voltage. The device is disabled when the ON pin voltage is 0.5 V or lower. The EN input is compatible with both TTL and CMOS logic.

## VBIAS Voltage Range

For optimal on-resistance of load switch, make sure $\mathrm{V}_{\mathrm{IN}} \leq$ $1.5 \mathrm{~V}+\mathrm{V}_{\text {BIAS }}$ and $\mathrm{V}_{\text {BIAS }}$ is within the voltage range from 3.2 V to 5.5 V . On-resistance of load switch will be higher if $\mathrm{V}_{\mathrm{IN}}+1.5 \mathrm{~V}>\mathrm{V}_{\mathrm{BIAS}}$. Resistance curves of a typical sample device at different $\mathrm{V}_{\text {BIAS }}=\mathrm{V}_{\mathrm{IN}}$ at $\mathrm{I}_{\mathrm{OUT}}=-200 \mathrm{~mA}$ are shown as below.

## Applications Information

The basic AOZ1334ADI-01 application circuit is shown in the first page. Component selection is explained below.

## Input Capacitor

A capacitor of $10 \mu \mathrm{~F}$ or higher value is recommended to be place close to the IN pins of AOZ1334ADI-01. This capacitor can reduce the voltage drop caused by the inrush current during the turn-on transient of the load switch. A higher value capacitor can be used to further reduce the voltage drop during high-current application.

## Output Capacitor

A capacitor of $0.1 \mu \mathrm{~F}$ or higher value is recommended to be place between the OUT pins and GND. The switching times are affected by the capacitance. A larger capacitor makes the initial turn-on transient smoother. This capacitor must be large enough to supply a fast transient load in order to prevent the output from dropping.

## Thermal Considerations

To ensure proper operation, the maximum junction temperature of the AOZ1334ADI-01 should not exceed $150^{\circ} \mathrm{C}$. Several factors attribute to the junction temperate rise: load current, MOSFET on-resistance, junction-toambient thermal resistance, and ambient temperature. The maximum load current can be determined by:

$$
I_{L O A D(M A X)}=\sqrt{\frac{T_{J(M A X)}-T_{C}}{\Theta_{J C} \times R_{D S(O N)}}}
$$

It is noted that the maximum continuous load current is 10A.

## Layout Guidelines

Good PCB is important for improving the thermal performance of AOZ1334ADI-01. Place the input and output bypass capacitors close to the IN and OUT pins. The input and output PCB traces should be as wide as possible for the given PCB space. Use a ground plane to enhance the power dissipation capability of the device.

## Package Dimensions, DFN3x3-8L

UNIT: mm

## Notes:

1. Dimensions and tolerances conform to ASME Y14.5M-1994.
2. Controlling dimension is millimeter, converted inch dimensions are not necessarily exact.
3. Dimension b applies to metallized terminal and is measured between 0.15 mm and 0.30 mm from the terminal tip. If the terminal has the optional radius on the other end of the terminal, dimension $b$ should not be measured in that radius area.
4. Coplanarity ddd applies to the terminals and all other bottom surface metallization.

## LIFE SUPPORT POLICY

## ALPHA AND OMEGA SEMICONDUCTOR PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
