

Alpha & Omega Semiconductor Product Reliability Qualification Report

AOZ8S516UDS-05 rev A

Plastic Encapsulated Device

ALPHA & OMEGA Semiconductor, Inc

www.aosmd.com

The report summarizes the AOS product reliability qualification results. Accelerated environmental tests are performed on a specific sample size and samples are electrically tested before and after each time point. Review of final electrical test results confirms that the product passes the AOS quality and reliability requirements based on **JEDEC** and may reference existing qualification results of similar products, which is justified by the structural similarity of the products. The released product will be categorized by its process family and routinely monitored for continuous improvement of product quality.

I. Reliability Stress Test Summary and Results

Test Item	Test Condition	Time Point Sample Size		Number of Failures	Reference Standard	
HTRB	Temp = 150°C, Vdd=100% of VRWMmax	1000 hrs	231 pcs	0	JESD22-A108	
Precondition	168hr, 85°C, 85%RH, 3 cycle reflow @ 260°C (MSL 1)	-	231*3 pcs	0	JESD22-A113 J-STD-020	
HAST	130°C , 85%RH, 33.3 psia, Vdd = 80% of VRWMmax up to 42V	96 hrs	231 pcs	0	JESD22-A110	
Autoclave	121°C, 100%RH, 29.7psia	96 hrs	231 pcs	0	JESD22-A102	
Temperature Cycle	-65°C to 150°C, air to air	1000 cycles	231 pcs	0	JESD22-A104	

II. Reliability Evaluation

FIT rate (per billion): 15.26

MTTF = 7480 years

The presentation of FIT rate for the individual product reliability is restricted by the actual burn-in sample size. Failure Rate Determination is based on JEDEC Standard JESD 85. FIT means one failure per billion hours.

At 60% Confidence Level

Failure Rate = $Chi^2 \times 10^9 / [2 (N) (H) (Af)] = 15.26$

MTTF = 10^9 / FIT = 7480 years

Chi² = Chi Squared Distribution, determined by the number of failures and confidence interval

N = Total Number of units from burn-in tests

H = Duration of burn-in testing

Af = Acceleration Factor from Test to Use Conditions (Ea = 0.7eV and $T_{use} = 55°C$)

Acceleration Factor [Af] = Exp $[Ea/k (1/T_J u - 1/T_J s)]$

Acceleration Factor ratio list:

	55 deg C	70 deg C	85 deg C	100 deg C	115 deg C	130 deg C	150 deg C
Af	259	87	32	13	5.64	2.59	1

T_J s = Stressed junction temperature in degree (Kelvin), K = C + 273.16

 $T_J u$ =The use junction temperature in degree (Kelvin), K = C + 273.16

k = Boltzmann's constant, 8.617164 X 10⁻⁵eV / K
